Los que vivimos cerca del Mediterráneo conocemos todos los matices de la luz.
Por eso cuando llega la noche la transformamos en pequeños espacios de día.

Wir, die in der Nähe des Mittelmeers leben, kennen alle Abstufungen des Lichts.
Wenn die Nacht kommt, verwandeln sie in kleine Punkte des Lichts.

Those of us who live near the Mediterranean know all the nuances of light.
For this reason, when night comes, we transform it into little spaces of day.

Mediterraneotik gertu bizi garenok ondo ezogutzen ditugu argiaren nabardura guztiak.
Horregatik, goua datorrenean egun bihurtzen dugu gure argi-gune txikien bitartez.

Ceux qui, comme nous, habitent près de la Méditerranée connaissent toutes les nuances de la lumière.
C'est pourquoi à la nuit tombée, nous la transformons en petits espaces de lumière.

Os que vivimos à beira do Mediterráneo conhecemos todos los matices da luz.
Por isso ao chegar a noite transformá-mos-la em pequenos espaços do día.

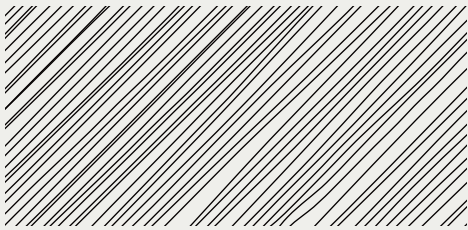

Noi che viviamo vicino al Mediterraneo conosciamo tutte le tonalità e le sfumature della luce.
Per questo quando cala la notte, la trasformiamo in piccoli spazi del giorno.

Quem vive perto do Mediterráneo conhece todas as nuances da luz.
Por isso, quando chega a noite, transformamo-la em pequenos espaços de día.

Lluís Porqueras

*Els que vivim prop de la Mediterrània,
coneixem tots els matisos de la llum.
Per això en arribar la nit la
transformem en petits espais de dia.*

Amphora

by Alex Fernández Camps / Gonzalo Milà | 2013

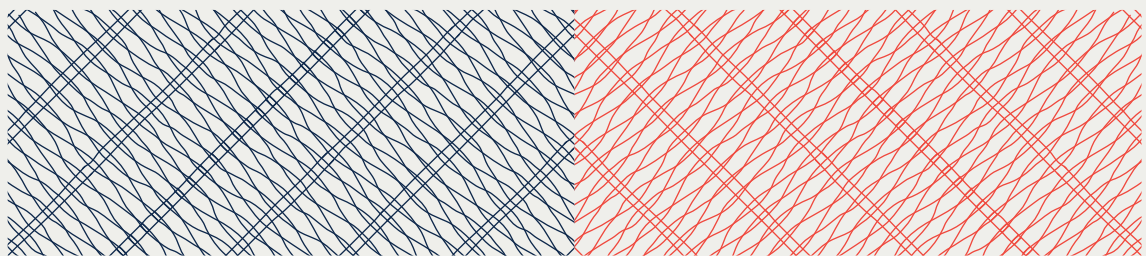

The AMPHORA collection has been designed to create a warm environment especially in outdoors. However, thanks to its highly decorative look, the Amphoras can equally be placed both in outdoor and indoor. The size and shape of this collection pay a subtle and discreet homage to the terracotta amphora formerly used for gardens and terraces decoration. In this collection we have used a synthetic fiber to make up big handmade baskets as shades with a tripod base subjected to a cataphoresis treatment. The light source is located inside the polyethylene ellipse which grants its water tightness. The light emitted by the Amphora collection is full of nuances and shapes avoiding glare.

Fora

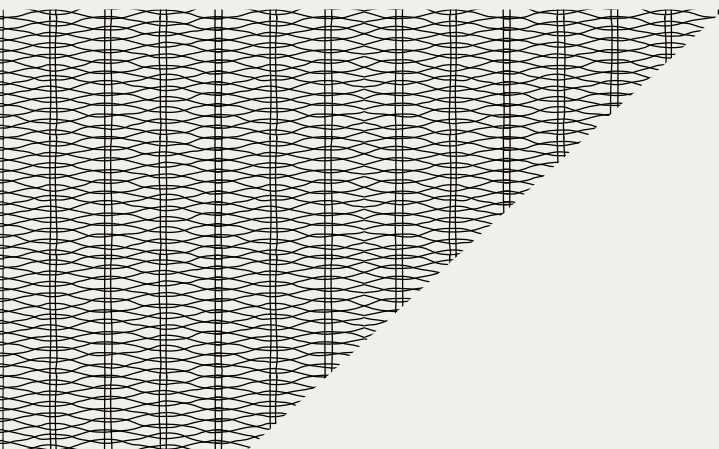

by Alex Fernández Camps / Gonzalo Milà | 2010

FORA is a product designed to illuminate warm outdoor spaces. The floor version is distinguished by a concrete base. Light source is protected by an elliptical medium intensity and U.V. protection polythene globe, which guarantees a water tight electrical fixture. The shade is made of synthetic marrow, making it highly resistant to weathering while casting a pleasant, diffuse light.

Hotel Nord 1901 / Girona

The result is a luminaire that adapts well to all types of indoor and outdoor environments. Its versatility is remarkable and difficult to find in products of this category. This family consists of a table lamp, floor lamp, ceiling, wall, pendant in small and big format.

Garota

by Alex Fernández Camps / Gonzalo Milà | 2015

GAROTA is a tribute to the Sea urchins, commonly found in the Mediterranean coasts. We all have sometime held the naked shell of a sea urchin and admire its outlined body. The elliptical shapes made in polyethylene are an essential part of the Bover outdoor collections because they protect the light source from rain and humidity. These globes are the focus of the Bover outdoor products because they offer a warm and clear light, surrounded by organic, rounded and delicate shapes, designed to be equally installed indoors or outdoors and create a surrounding comfort.

The Garota Hang is a lamp designed for terraces and gardens where typically there is not the ability for conventional outdoor lighting. You can hang from a tree or an arbor with the provided accessory allowing the ability to tie the lamp temporarily. The Hang accessory is rubber with an inner wire enabling excellent fastening while maintaining its form despite the inclement weather. It is resistant to UV rays and allows a long sun exposure.

Use caution so as not to scratch or mark surfaces when fastening.

The Garota Hang has 4 meters of neoprene cable with plug.

With this same shade size there is a hard wired version with ceiling rose and IP -55 neoprene cable.

In all cases the outdoor version of Garota incorporates a small elliptical polyethylene diffuser which allows us to maintain the airtight LED plate.

Maxi

by Joana Bover | 2004

Hotel Vincci / Marítimo

MAXI represents for sure the most characteristic and emblematic product of BOVER. Made out of translucent ribbon since its creation in 2001, Maxi has achieved positioning itself as one of the most reliable and best seller product in BOVER's catalogue, regardless the market or culture it is addressed to. Maxi meets in one product BOVER's essence: its smooth shapes, its warm light and the different available options. It presents to the market a non-temporal offering, adapting itself without fussiness to any environment without losing its contemporary aspect. Motivated by these reasons, we decided to go a step forward and reinvent it going beyond the verge of indoor products, to bring Maxi to gardens, terraces and open spaces where its marked warm feature can offer us a good light coming out from its polythene shade.

Tarambana Espai Cultural i Gastronòmic / Cardedeu

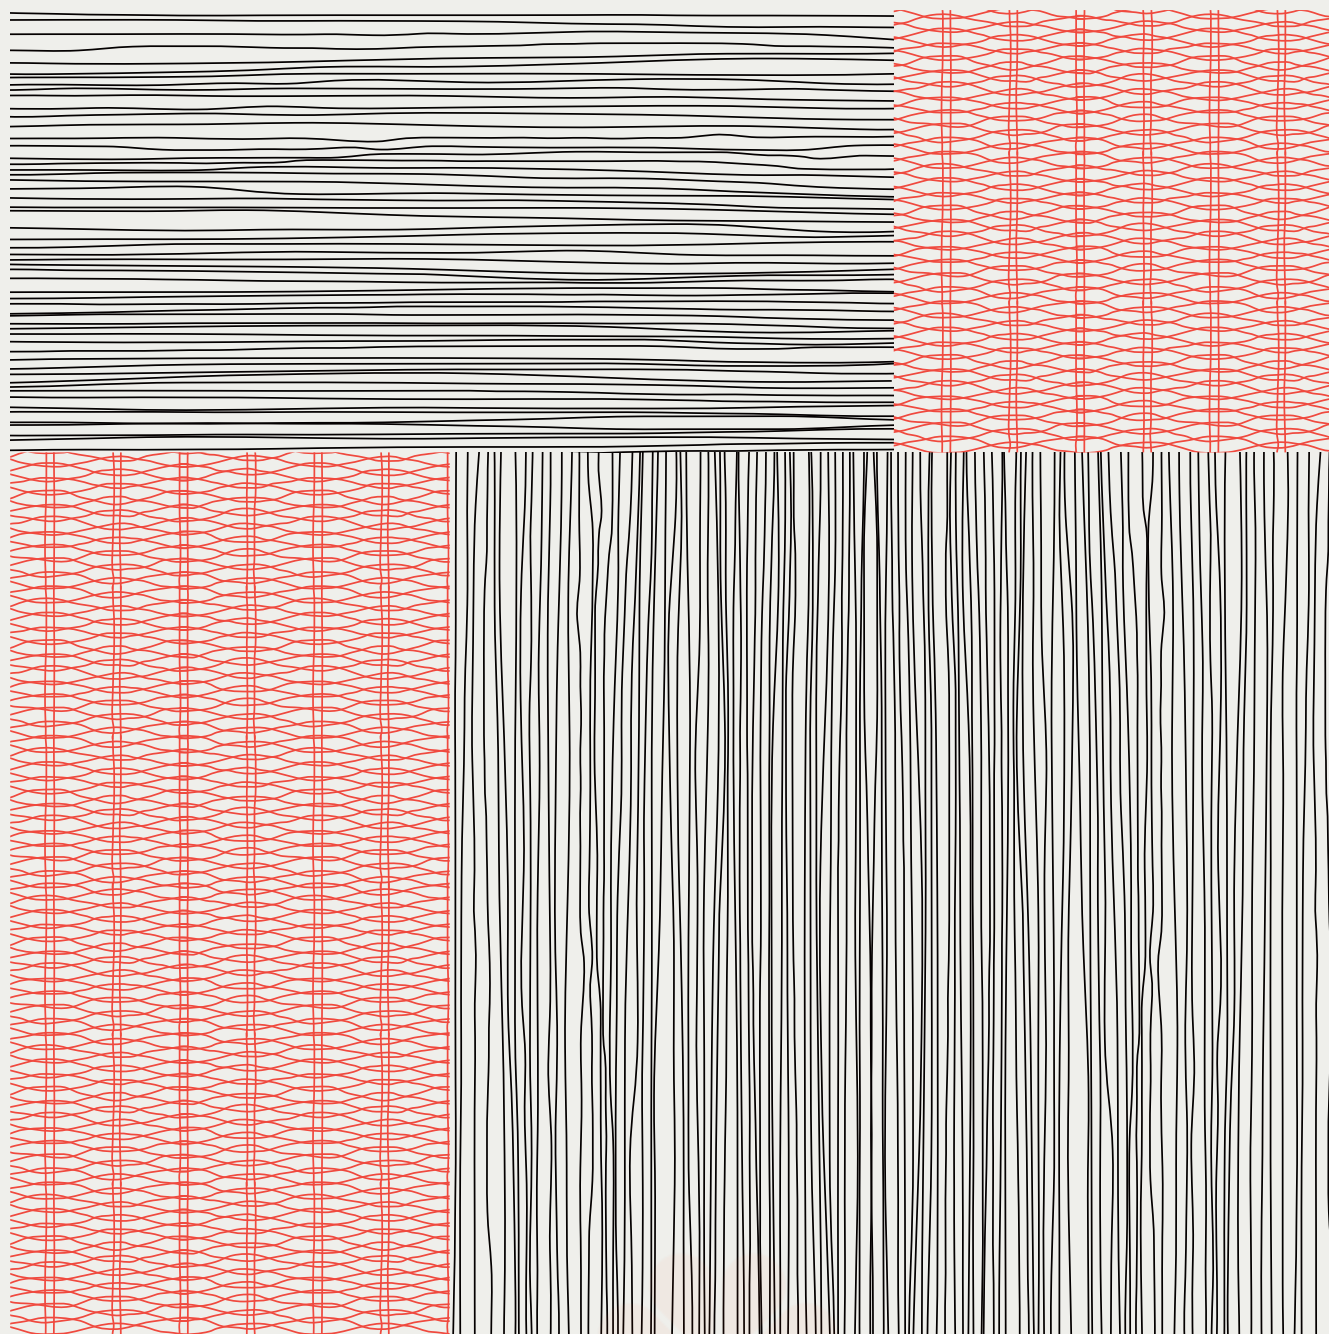

SYRA is an outdoor pendant lamp, easily identifiable and characteristic within BOVER's Outdoor collection. Shade is made of aluminum structure, woven with synthetic fiber. The inner light source is protected by an opal glass diffuser which softens the outgoing light. Metal elements subject to welding are treated with antirust processes (Cathaphoresis) Designed to be a versatile product to be used both in interior and outdoor applications. Thanks to the LED plate, Syra is a resistant and energysaving luminaire. Syra range is ideal for half-closed spaces, terraces and covered porches which need warm light and kind elements to bring comfort. Its height can be regulated through the tensor wires.

Lea

by Alex Fernández Camps | 2009

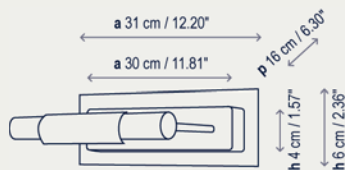

Lea is an architectural wall light with no ornaments. It is useful to keep our work space in order and also offers a high quality bottom light. Lea can be installed in different places, such as headboard, corridors, kitchens...although above a desk would be the place where it probably looks best. When we are staying in a hotel room we can find lots of information about the city, international press, info about the hotel usually on the room desk. The Lea wall lights include a shelf in the top part able to store books and magazines up to 4 kgs to release space from the desk. They are also available with direct switch.

Nón Lá

by Jorge Pensi Design Studio | 2015

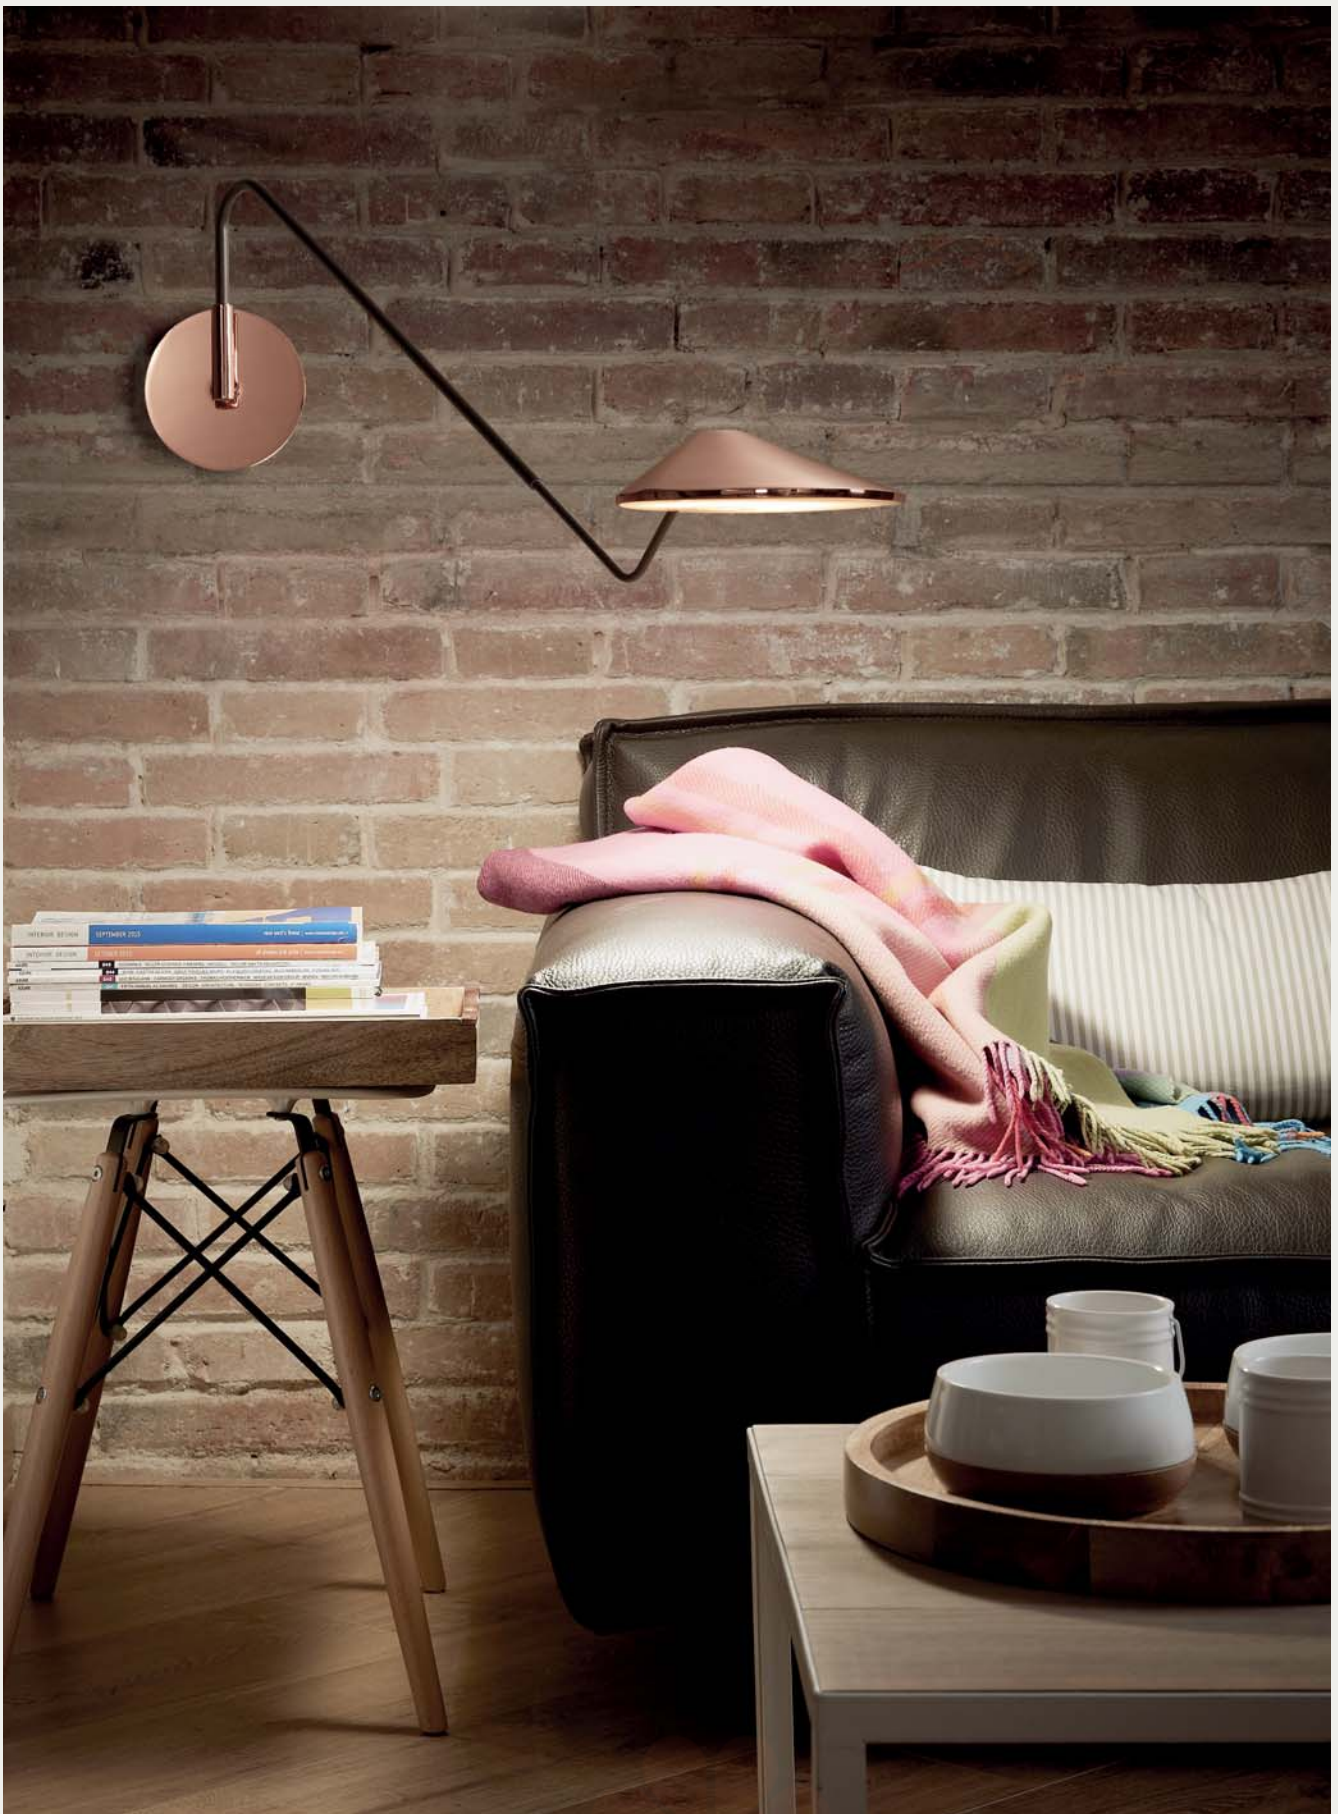

One of the most distinctive signs from Vietnam is the hat used by women in the countryside to protect themselves from the sun and the rain and as a basket to carry food. NÓN LÁ is the name used to describe this Vietnamese hat and it is also the name we selected for this lamp. This is the way we pay homage to its shape and centenary culture. The simplicity of this cone-shaped lamp, offers a lightweight and resistant structure with an avant-garde touch thanks to the decentralized light cavity. The lamp's hood is made out of aluminium and then plated or lacquered. Nón Lá fills the space with direct light and includes a polycarbonate diffuser which hosts a dimming led plate.

TRIA is a wall light designed as a modular system made with led plates, which makes it easy to build up light clusters connected to each other by an inside structure. The TRIA frontal parts are made in white lacquer or natural oak and they can be slightly moved to offer a suggestive play of light and shadow around the organic shape of the diffuser. TRIA can be installed either as a single wall light or as a light module with a sole connection point on the wall which makes it easier to be installed in halls, offices and hotel reception desks and lobbies. A dimmable version is available.

Design: Benedetta Tagliabue/ EMBT | 2015

BEST of year INTERIOR DESIGN
HONOREE 2015

The integration of design, art and light in architecture dates back to a long time ago, and maybe this is the reason why lamps have gradually stopped being just an item emitting light to become a light sculpture which confers a special personality to the product and its environment. It is such the importance of light that any change on the item can alter the formal concept of the whole project. A sculpture may seem more or less static, depending on the light received. With DOME we decided to take the light out of the object so it becomes a light sculpture designed to receive and emit a delicate light, a play of shadows and nuances that enrich the space for which they were created. Developing this project with Benedetta has allowed us to reflect on the art of lighting, on how to reinterpret light and on the creation of products with a more artistic approach and a less industrial look. It has also allowed us to be swept away and do what we really like to do. These light sculptures are completely handmade and they are entirely produced in the Bover Barcelona HQ. More than 170 big and small wood fragments are wisely intertwined and sewed one by one to end up in such a jigsaw puzzle.

“Dome is a light sculpture which proposes a play of shadows and delicate light, born in the mediterranean. Only Bover could make it possible.”

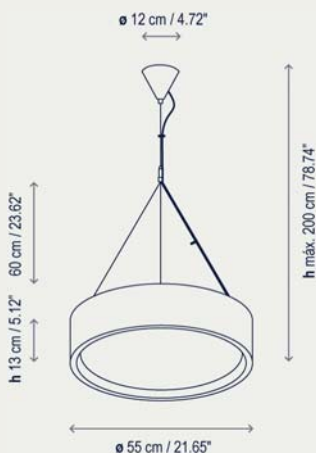

Benedetta Tagliabue.

by Joana Bover | 2010

INARI is a collection of opal blown glass lamps, having its main feature on the irregularity of its lines which confer form and character to the product and emit a soft, cozy and diffuse light with a greater comfort degree. The organic shape hide its light source inside, without diminishing the role of its engraving and line design. This family consist of a pendant lamp, table, and floor light arriving from a common graphic concept, however they are completely diferent. Table and floor lamp incorporate dimming version.

Slend

by Christophe Mathieu | 2014

Hotel Can Cuc / Cànoves

SLEND'S main goal is to make spaces elegant throughout slim and delicate shapes. These lights have three different formats which can be combined as desired, achieving a large range of applications. We can show them individually or grouped in different heights. Slend is made out of spun aluminum and includes the led bulb inside, which can be easily replaced. The direct light and the bulb with a 100° light opening makes Slend an excellent choice for spaces and objects we want to light up (restaurant tables, store counters, stairwells...).

The Garota Indoor 01 is designed for indoor applications that do not require the technical specifications incorporated within our outdoor products. For this reason we do not need the polyethylene ellipse to ensure a seal on the light source / IP -55. The LED plate from the outdoor version has been replaced by an E-27 socket for interior use. The electric cable is transparent and the ceiling canopy or wall mounting is made of iron with white or brown finish.

by Christophe Mathieu | 2007

SPOCK lamps transmit a lightness appearance, thought and produced through the simplest and easiest design language, 'Less is more'. The Spock family, are reading lamps that offer us direct light concentrated through its 4 LEDS. The hood is adjustable and in case of table and floor lamp models, its hood has a circular movement of 360° and a maximum slope of its stem of 25°.

BCN

by Joana Bover | 2012

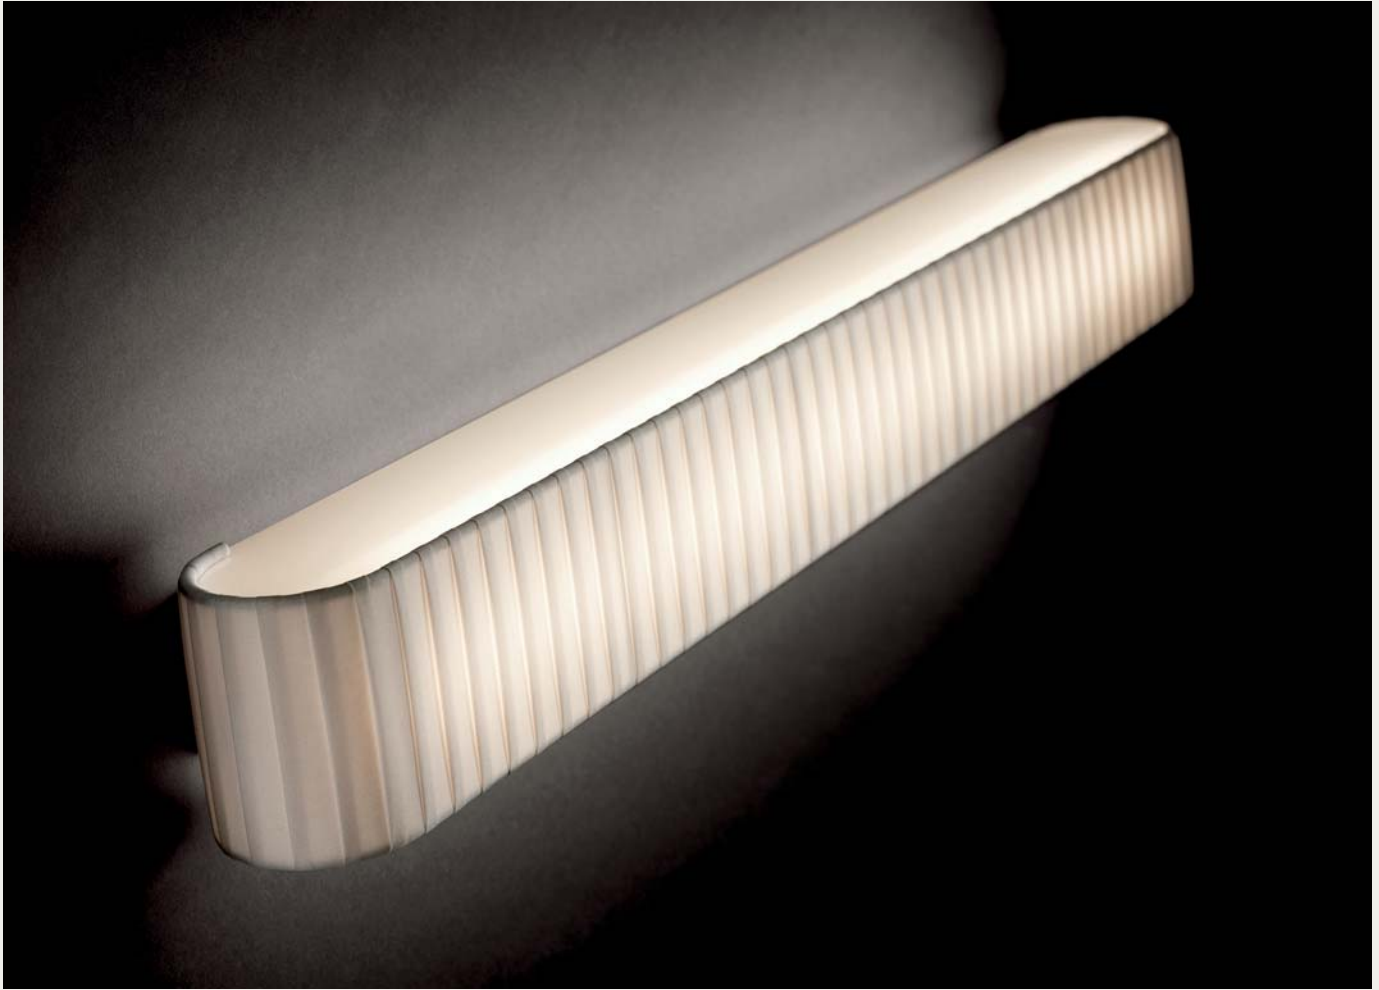

Barcelona is the home for Bover and inspiration for much of our lighting. BCN is the code used as shorthand for our city and has given the name to this fixture. In addition to the brilliant lacquered version of BCN we have increased this family to include a discreet, but sophisticated sconce fusing LED technology with our hand wrapped ribbon with top and lower diffuser in polycarbonate. BCN creates a contemporary but timeless fixture suited for hallways, vanities or anywhere a low profile sconce may be required. Available in 2 sizes, the larger having also a fluorescent option as well as LED.

Important note:
Wall sconce product photography
doesn't show US backplate mounting.

Design: Joana Bover | 2007

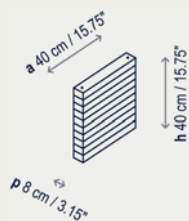

Mei Wall joins the Mei family of pendants, table and floor light. Like the others in the Mei collection, this sconce features clean construction with hardware hidden allowing for options of glass or even leather on the backplate to give a warm sophisticated look. The shades are available in Bover's ribbon options or cotton materials.

Silantra

by Christophe Mathieu | 2004

The ceiling, pendant and wall lights of Silantra collection designed by Christophe Mathieu are products meant to improve the illumination in work spaces. The Silantra family has the goal of introducing the ribbon material in the corporate environment, in order to transform the work areas in more comfortable and friendly spaces, where light becomes an essential element for two different reasons: Offer a good light with a high efficiency. Making the work area become a more warm and pleasant place. Make the working areas become a more warm and pleasant place.

Cornelia

by Joana Bover | 2013

CORNELIA, an intense and continuing bet on Bover's characteristic Big Formats. It is an exuberant light following Scandinavian design guidelines resulting in a luminaire full of light nuances and a strong artistic expression. Cornelia is far from those conventional designs offered with classic chandeliers and shows a more contemporaneous and even industrial look. Regardless of the place Cornelia is installed, it gets a remarkable appearance thanks to its adjustable arms and the possibility of angling its shades as desired. Cornelia's format enables us to create an almost à la carte Custom Product. Cornelia consists of 36 joints made out of brass which function is permitting different final positions of the arms. The shades have an inner independent reflector and are customizable are not showing the common radius which are usually visible on the shades. Another interesting feature of the diffuser is its mobility, easy maintenance and light source replacement. The central shaft of Cornelia may be modified on project specification, depending on the height and installation conditions.

Marietta

by Joana Bover | 2015

MARIETTA is an outstanding interpretation of the classical industrial lights installed in most of the warehouses and factories in Europe during the beginning of the Twentieth Century. In Bover we took the decision of going through this classical and functional lighting model and make it into a warm, contemporary and decorative object, which is able to adapt to any environment and live together with other products more purist and with less presence. After studying it, we decided to keep the aluminum cone as the original one used also with the metal

ring, showing discreetly the nature of the luminaire. The handmade ribbon shades make this piece special and unique. MARIETTA collection consists of Big Format lights designed both for corporate and commercial spaces, for the restaurant industry and indoor spaces. MARIETTA includes a polycarbonate bottom diffuser and is available in dimmable version.

MAXI represents for sure the most characteristic and emblematic product of BOVER. Made out of translucent ribbon since its creation in 2001, Maxi has achieved positioning itself as one of the most reliable and best seller product in BOVER's catalogue, regardless the market or culture it is addressed to. Maxi meets in one product BOVER's essence: its smooth shapes, its warm light and the different available options. It presents to the market a non-temporal offering, adapting itself without fussiness to any environment without losing its contemporary aspect.

Mei

Design: Joana Bover | 2004

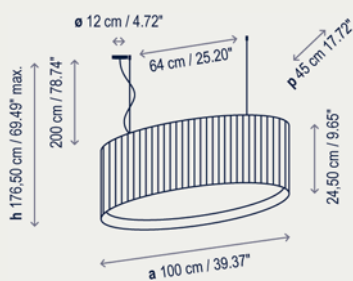

Mei is a pendant family composed of different shapes and lines but with a common denominator: the ribbon. The ribbon shades are entirely made in BOVER, starting with the frames welding to the ribbon process itself. This allows us to totally control the product quality, custom process and delivery terms. The Mei lamps are great for environments where a warm light is required. They mostly have a wide diameter, offering as a result a good direct light. Discrete and decorative since its mechanical structure is hidden inside the lamp, as if they were in a second place. Lamps are held by thin tensor wires that enhance its lightness. With Mei collection we have developed tailor-made lamps with important dimensions, and we have been able to make a quality packaging to ensure the shipment worldwide.

Oliver

by Sergi Devesa / Òscar Devesa | 2013

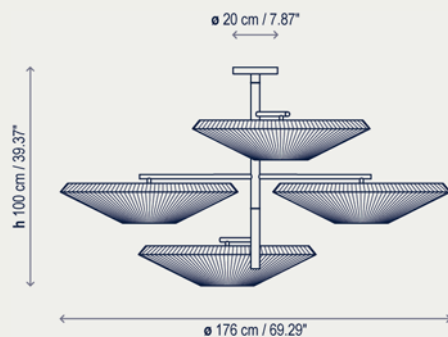

OLIVER is clearly oriented to the Contract/Hospitality sector thanks to its features. These luminaires are made out of borosilicate glass and a warm light source to bring efficient light without glare and easy maintenance. Oliver incorporates an inner textile shade, protected from dust through the glass and available in 6 different finishes or even customized.

The URBAN collection is part of the BOVER product line usually used in the Contract/Hospitality sector but also created for the Residential market. The metallic ring which holds the bottom of the structure, functions as well as a decorative element of the large light diffuser. The light emitted by this lamp, as the major part of BOVER luminaires, is warm and cozy.

SIAM breaths a certain
oriental air derived from
the inverted shade.
It takes its essence from
MEI and offers a soft
cascading light.
These luminaires can
be grouped in varying
compositions, superposing
shades partially one over
the other, and creating a
perfect mural for any space.
